-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on Jul 23, 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 3, 4, 9, and 12-14 is/are pending in the application.
- 4a) Of the above, claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 3, 4, 9, and 12-14 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claims \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.  
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☐ All b) ☐ Some\* c) ☐ None of:  
1. ☐ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).  
\*See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).  
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s). \_\_\_\_\_ 6) ☐ Other: \_\_\_\_\_

Art Unit: 2815

### **DETAILED ACTION**

This Office Action is in response to an amendment filed July 23, 2003 on which Applicant amended claims 3 and 9.

#### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 4, 9, 12, 13 and 14 are rejected under 35 U.S.C. § 103 (a) as being unpatentable over Pio et.al. (U.S. Patent No. 5,894,146) in view of Juang et.al. (U.S. Patent No. 5,547,882). With regard to Claim 3, Pio teaches a memory array comprising a plurality of floating gate transistors (2) connected in series, each floating gate transistor having formed, in a well of a substrate, a source (15) region and a drain (16) region and a channel region separating said source and drain regions.

However, Pio fails to show a dopant concentration region displaced about a target region, said target region situated below said channel region, said dopant concentration region extending into said channel region such that said channel region has a non-uniform concentration of dopant and wherein said source and drain regions and the dopant concentration have the same conductivity.

Art Unit: 2815

Juang teaches a field effect transistor that includes a transistor having a gate (62) and active regions (64) and channel region, separating the said source and drain regions, having a dopant concentration region with a retrograde channel profile, thus providing a channel region having a non-uniform concentration of dopant. Therefore, it would have been an obvious modification to someone with ordinary skill in the art, at the time of the invention, to modify the structure as taught by Pio to include a dopant concentration region displaced about a target region, said target region situated below said channel region, said dopant concentration region extending into said channel region such that said channel region has a non-uniform concentration of dopant and wherein said source and drain regions and the dopant concentration have the same conductivity, as clearly suggested by Juang, in order to obtain proper threshold voltage (column 3, lines 2-4) and improve short-channel effect behavior (column 3, lines 12-15).

With regard to Claims 4 and 12, the claims contain the limitation "*said dopant concentration region is formed by a tilted ion implantation utilizing as a mask, at least a part of a gate structure of each floating gate transistor*", this is a product by process limitation. A "product by process" claim is directed to the product per se, no matter how actually made, In re Brown, 173 USPQ 685; In re Luck, 177 USPQ 523; In re Fessmann, 180 USPQ 324; In re Avery, 186 USPQ 161; In re Wertheim, 191 USPQ 90 (209 USPQ 554 does not deal with this issue); In re Marosi et al, 218 USPQ 289; and particularly In re Thorpe, 227 USPQ 964, all of which make it clear that it is the patentability of the final product per se which must be determined in a "product by

Art Unit: 2815

process" claim, and not the patentability of the process, and that an old or obvious product produced by a new method is not patentable as a product, whether claimed in "product by process" claims or not. Note that applicant has the burden of proof in such cases, as the above case law makes clear.

With regard to Claim 9, Pio teaches a memory array comprising a plurality of floating gate transistors (2) connected in series, each floating gate transistor having formed, in a well of a substrate, a source (15) region and a drain (16) region and a channel region separating said source and drain regions.

However, Pio fails to show a dopant concentration region displaced about a target region, said target region situated below said channel region, said dopant concentration region extending into said channel region such that said channel region has a non-uniform concentration of dopant and wherein said source and drain regions and the dopant concentration have the same conductivity. Juang teaches a field effect transistor that includes a transistor having a gate (62) and active regions (64) and channel region, separating the said source and drain regions, having a dopant concentration region with a retrograde channel profile, thus providing a channel region having a non-uniform concentration of dopant. Therefore, it would have been an obvious modification to someone with ordinary skill in the art, at the time of the invention, to modify the structure as taught by Pio to include a dopant concentration region displaced about a target region, said target

Art Unit: 2815

region situated below said channel region, said dopant concentration region extending into said channel region such that said channel region has a non-uniform concentration of dopant and wherein said source and drain regions and the dopant concentration have the same conductivity, as clearly suggested by Juang, in order to obtain proper threshold voltage (column 3, lines 2-4) and improve short-channel effect behavior (column 3, lines 12-15).

With regard to Claims 13 and 14, Applicant merely labels the claimed invention as "*the transistor is an NMOS transistor*" and "*the NMOS transistor is a floating gate transistor*", however, the claimed invention does not structurally distinguish from that taught by the prior art.

### ***Response to Arguments***

2. Applicant's arguments with respect to claims 3, 4, 9 and 12-14 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Art Unit: 2815

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Edgardo Ortiz (Art Unit 2815), whose telephone number is (703) 308-6183 or by fax at (703) 308-7722. In case the Examiner can not be reached, you might call Supervisor Eddie Lee at (703) 308-1690. Any inquiry of a general nature or relating to the status of this application should be directed to the Group 2800 receptionist whose telephone number is (703) 308-0956.
